Great Basin Climate Forum 2012: Fall Outlook

A discussion of current climate conditions in the Great Basin

Desert Research Institute, Reno, Nevada
October 17, 2012
9am-4:30pm

The California Nevada Applications Program (CNAP), Great Basin Landscape Conservation Cooperative (GBLCC) and the Western Regional Climate Center (WRCC) are hosting the second Great Basin Climate Forum to summarize the current climate conditions in the Great Basin. This meeting is intended for public and private land managers, resource professionals, and interested individuals who are involved in resource management in the Great Basin. Admission is free. Topics to be covered include:

- A recap of the summer and early fall climate conditions and winter prospects for the Great Basin
- Review of summer and early fall wildfire conditions through 2012 and looking forward to 2013
- Current status of Lahontan cutthroat trout and effects of climatic conditions
- Discriminating between short and long term changes in weather on Great Basin ecology
- Hydro-climate effects on rangeland ecosystem soils
- Surface and groundwater interactions on summertime streamflow
- Current climate impacts on Great Basin tribes

**Presenters**

Kelly Redmond, Western Regional Climate Center
Chad Mellison, U.S. Fish and Wildlife Service
Clint Koble, U.S. Farm Service, Nevada (invited)
Erica Fleishman, U.C. Davis
Gina McGuire, WGBCC Predictive Services, BLM
Matt Germino, USGS and the Great Basin LCC
Justin Huntington, Desert Research Institute
Olin Anderson, Pyramid Lake Paiute Tribe

The information presented during this meeting is intended to provide resource managers timely and relevant information about current climate conditions to support near-term management decisions. If you cannot attend in person, a webinar of the meeting will also be offered.

Register to attend in-person or the webinar at gbcf.doattend.com
