Northern Great Basin Climate Forum: Winter Outlook

A discussion of current weather & climate conditions and associated management issues & needs in the northern Great Basin

Oregon Institute of Technology, Klamath Falls, OR
November 30, 2012
9am-4pm

The California Nevada Applications Program (CNAP), Great Basin Landscape Conservation Cooperative (GBLCC), Climate Impacts Research Consortium (CIRC) and Integrated Landscape Assessment Project (ILAP), are hosting a pilot one-day meeting to summarize the current climate and weather conditions in the Great Basin. This meeting is intended for public and private land managers, resource professionals, and interested individuals who are involved in resource management in the northern Great Basin. Topics to be covered include:

- An overview of current climate & weather conditions and prospects for winter
- Post-fire restoration in current climate conditions
- Projecting invasive weed risk under current and future climatic conditions
- Migratory birds--drought conditions & outlook
- Climate related decisions in the next decade and beyond
- Arego moth and sagebrush defoliation

Presenters
Kelly Redmond, Deputy Director, Western Regional Climate Center
Mark Petrie, Ducks Unlimited
Megan Creutzburg, Institute for Natural Resources
Phil Mote, Director, Oregon Climate Change Research Institute
Virginia L.J. Bolshakova, Utah State University
Louisa Evers, Bureau of Land Management

The information presented during this meeting is intended to provide resource managers & planners timely and relevant information about current climate and weather conditions to support near, mid- and long-term management decisions.

Register to attend at ngbcf.doattend.com

Registration is required, but admission is free & lunch provided
